YJ-SE51 Filling Depositor

This machine is made of stainless steel and is designed to deposit vertically, which ensures damage-free depositing while preserving the traditional and authentic taste. Furthermore this machine is easy to dismantle and clean, and can also use different nozzles according to the filling type in order to accommodate different product needs.

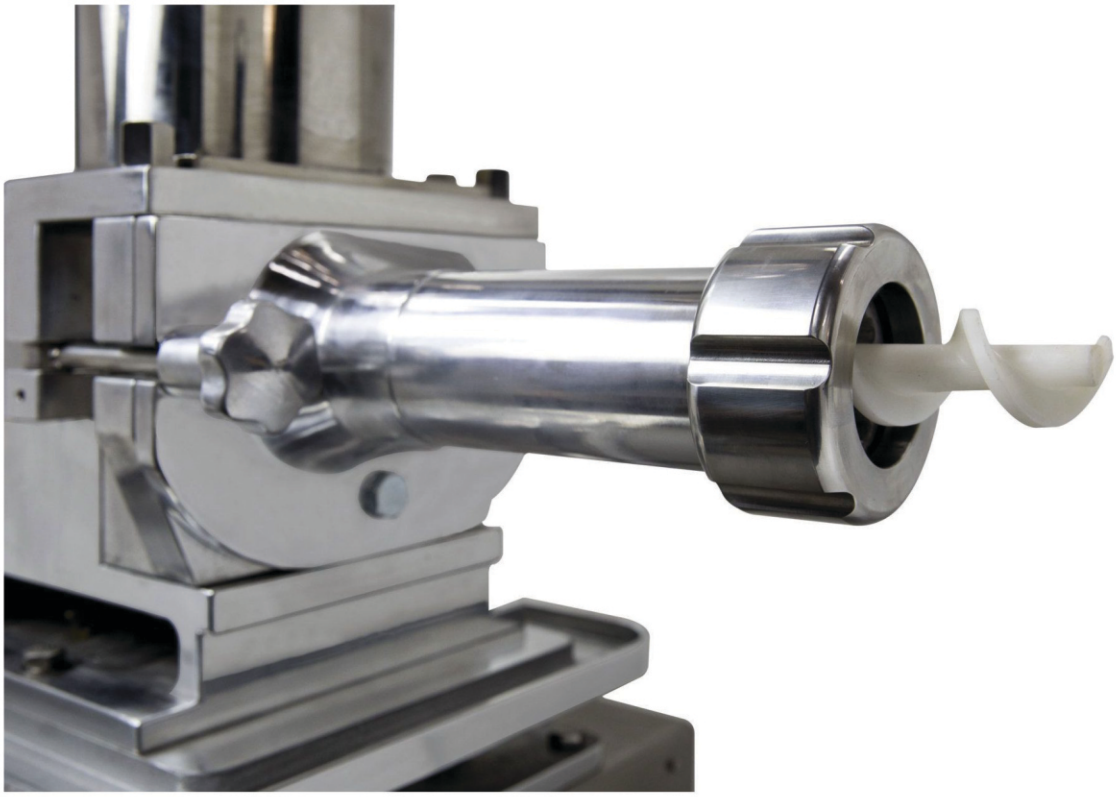
Industrial Hopper

With a 16 L hopper capacity this machine is capable of large volume deposits of meat, bean, Jam, grain filling and more. Our industrial size filling depositor can be connected to the main production line system meaning the deposit speed and rate can be accurately adjusted through the main control panel allowing for fully automatic production.

BESTERM

Screw Type Depositor

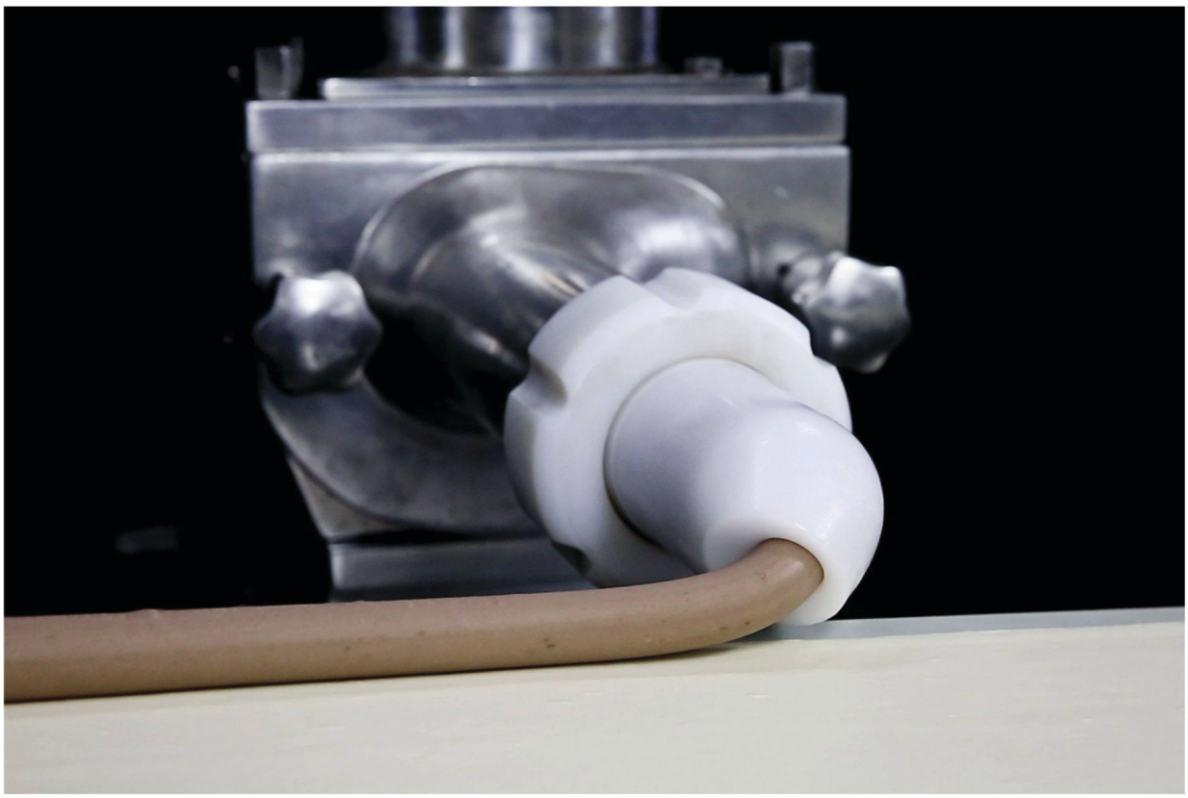
Our filling depositor uses a heavy duty industrial build screw type design for reliable continuous depositing.



BESTERM

Damage Free Depositing

The filling is extruded horizontally allowing for a steady and reliable continuous flow and damage free filling is carefully deposited on the sheet preserving the traditional and authentic taste.



BESTERM

Cleaning- Easy Dismantling

Two star shape hand knob bolts on either side of feed screw allow for easy and quick dismantling and cleaning.
