

BESTERM

YJ-SW45 Twist Dividing Machine

This machine features our standard 9 blade cutter design, and our knife systems are made of industrial food grade resin from Japan which meets the most stringent hygiene requirements. Our auto lubrication system allows the knives to be fully lubricated at all times, which is

BESTERM

Knife Mechanism

Our knife systems are made of specific industrial food grade resin from Japan suitable to the most stringent hygiene requirements. 4 hand knob bolts secure the mechanism allowing easy change and cleaning.

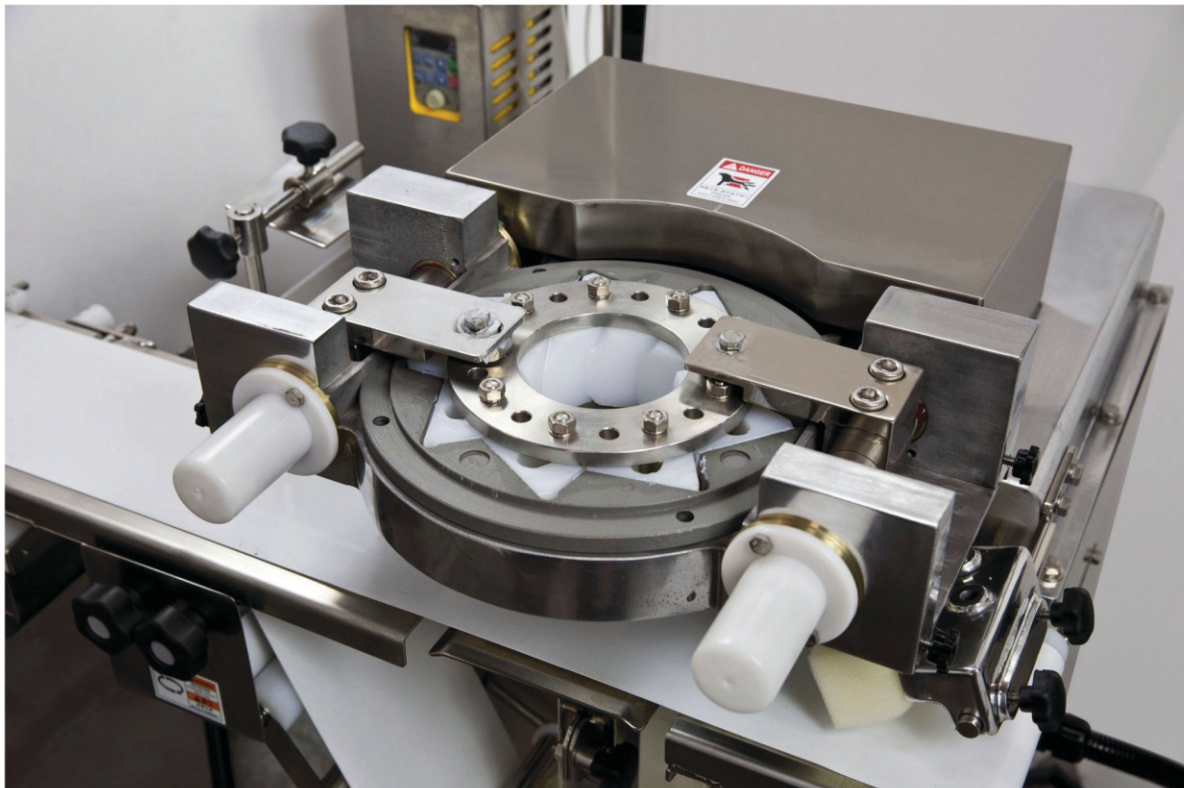

BESTERM

Knife Mechanism (2)

Using the drive cam structure gives significant advantages such as stable transmission, long life, easy to dismantle and install. Our knife systems are made of specific industrial food grade resin from Japan suitable to the most stringent hygiene requirements

BESTERM

Fully Adjustable

Shatter can be matched with the lifting board to automatically adjust and maximize the product shape. Our design allows for automatic peaking and you can easily adjust height, positioning and tension in order to meet the custom requirements of different productions.

BESTERM

Independent Control Speed

The conveyor belt speed may be adjusted independently, and our control module allows user to set intermittent or continuous working functions.

BESTERM

Dough Scraper

Fully adjustable dough scraper ensures the conveyor belt is clean and scraps are taken care of automatically.

BESTERM

Auto Lubrication

Our auto lubrication system allows the knives to be fully lubricated. This is crucial to prevent any damage to the knives when running at high speeds and will significantly prolong the life span of the equipment.

BESTERM

Lockable Castors

Lock your equipment in place for safe production and minimal movement.

BESTERM

Knife Mechanism (3)

Our standard 9 blade cutters allow for a traditional 9 fold steam bun. We also offer a fold less shape forming.
